SELECCIONADO:

Getting Rich Is Making You Poorer

■ Paradoja fuerte · framing negativo · directo al avatar Daniel (gana bien, ahorra poco).

ALTERNATIVAS — si quieres más fuerza antes de publicar:

- Why Every Raise Makes You Feel Broke (Not Richer) [+3 pts — 'broke' tiene más búsqueda]
- How Your Brain Turns Every Raise Into a New Bill [+1 pt — mecanismo explícito]
- Why Getting Rich Is Making You Broke [+2 pts — más agresivo, hit directo]

■■ ACCIÓN: Considera 'Getting Rich Is Making You Broke' — 'broke' supera siempre a 'poorer' en CTR.

— 2 · YOUTUBE DESCRIPTION —

You got the raise. You upgraded the apartment. Two weeks later — the feeling was gone.

This is not a personal failure. It is a mechanism called hedonic adaptation — and the consumer economy is built on top of it.

In this video:

- Why lottery winners report the same financial anxiety 18 months after the win
- The Diderot Effect: how Denis Diderot's scarlet robe sent him into debt in the 1700s
- The Easterlin Paradox (1974): why richer countries are not happier countries
- 5 structural moves that break the treadmill — without willpower

CHAPTERS:

- 0:00 The raise that made him poorer
- 1:30 Hedonic adaptation — what your brain does every time you upgrade
- 2:45 The Diderot Effect: one upgrade, total cascade
- 4:15 How the consumer economy is calibrated to your reset
- 5:30 The Easterlin Paradox — more money, same feeling
- 6:45 5 structural moves that break the treadmill

Neurocents breaks down one cognitive bias per video — the science behind why intelligent people make bad financial decisions. Subscribe. New video every week.

CONCEPTO A — 16:9 principal:

- Fondo blanco
- Alex corriendo en una cinta de correr — cara cansada, sudando
- Brain Villain dentro del cráneo — smug, sin moverse, mirando a Alex correr
- Texto izquierda: 'YOUR RAISE' (grande, negro) / 'IS THE TRAP' (rojo, bold)
- Cinta etiquetada con flechas circulares — va a ningún lado

CONCEPTO B — 16:9 alternativo:

- Fondo blanco
- Izquierda: Alex con paycheck, expresión aliviada
- Derecha: mismo Alex, 2 semanas después — ansioso, cartera vacía
- Texto arriba centro: 'SAME FEELING' (bold, negro) / '18 MONTHS LATER' (rojo)

■■ **CRÍTICO:** Alex = **BLUE** t-shirt (**NOT** red). Brain Villain **DENTRO** del cráneo transparente — **nunca** flotando fuera. Fondo blanco.

— 6 · PINNED COMMENT —

The mechanism is called hedonic adaptation — your brain recalibrates what 'normal' feels like every time your circumstances improve. New salary, new floor. New apartment, new baseline. The gap stays the same.

The 5 moves at 6:45 are structural, not willpower-based. The key one: automate before the baseline sees the money. Which one are you running this week?

— 7 · COMMUNITY COMMENTS (post from 2 accounts) —

Comment A:

This one hit. I got a 35% raise 18 months ago and I'm somehow more stressed about money than before. Didn't have a name for it until now. The Diderot Effect is terrifying — I upgraded my phone after the raise and suddenly my laptop looked wrong, then my desk, then everything. The cascade is real.

Comment B:

'Enough is not a number. Enough is a decision.' Stopping the video to write that down. The Easterlin Paradox makes the whole thing feel less like a personal failure. Countries that got 3x richer over 30 years didn't get 3x happier. The mechanism runs on everyone.

Reply to A:

The cascade is the part nobody warns you about. One upgrade and everything adjacent looks inadequate. Diderot figured this out in the 1700s — and we're running it on autopilot every time the salary changes.

Reply to B:

That line is the Easterlin Paradox in 7 words. The structural fix (automate before the baseline sees the money) works because the brain can't adapt to money it never registers as income.

— 8 · REDDIT DISTRIBUTION —

r/personalfinance — 'Got a raise every year for 3 years. Somehow more anxious about money now. Found out it has a name.'

I started tracking this when my emergency fund didn't grow despite two promotions. Salary up 45%. Savings: same. Credit card balance: higher. Couldn't explain the math.

The mechanism is called hedonic adaptation — your brain recalibrates 'normal' every time circumstances improve. New salary becomes the floor. New apartment becomes the baseline. And the gap between what you earn and what you feel you need stays exactly the same.

There's also the Diderot Effect (one upgrade makes everything adjacent feel inadequate) and the Easterlin Paradox (countries that got significantly richer over 30 years showed no increase in reported happiness).

Video I made on the mechanism and 5 structural interruptions (no willpower required): [\[link\]](#)

r/financialindependence — 'Hedonic adaptation is the hidden tax on every raise — and lifestyle creep is just the symptom'

FIRE community talks a lot about lifestyle creep but less about the underlying mechanism. Hedonic adaptation means your brain physically recalibrates its baseline every time your circumstances improve. The new salary doesn't feel like more money — it feels like the new floor.

Lottery winners show the same financial anxiety 18 months post-win as before. The Easterlin Paradox (1974): richer countries aren't happier countries. Same mechanism.

The structural interruption (automate before the baseline sees it) is Save More Tomorrow thinking. Did a deep breakdown of the science: [\[link\]](#)

r/psychology — 'The Diderot Effect: why one upgrade triggers a spending cascade (documented in the 1700s)'

Denis Diderot received a gift: a beautiful scarlet robe. He put it on and noticed everything in his study looked shabby by comparison. He replaced the chair. Then the desk. The curtains. The art. By the end: full room renovation, in debt.

He wrote about it himself ('Regrets on Parting with My Old Dressing Gown'). He called it a spiral he couldn't explain. The name came later: the Diderot Effect. One upgrade makes everything adjacent feel

inadequate.

It's the consumer-facing version of hedonic adaptation. Planned obsolescence, subscription models, and consumer credit are all calibrated to the same reset mechanism.

Video on the full chain (Diderot + Easterlin + hedonic treadmill + 5 structural fixes): [\[link\]](#)
