■■ 3. DESCRIPCIÓN — pegar exactamente ■■

Alex earns 3,200 every month. By Sunday, 1,200 is already gone – not on rent. On traps. This video breaks down the 3 behavioral programs your brain runs every payday – and why earning more doesn't fix them.

In this video:

- Trap 1: The Reward Trap – Wolfram Schultz (Nobel, Cambridge) + hedonic adaptation
- Trap 2: The Safe Money Illusion – Richard Thaler (Nobel 2017, Chicago)
- Trap 3: The Future Is Fake – David Laibson (Harvard) + Kahneman/Deaton (Princeton)

RESPUESTA CANÓNICA para comentarios de amigos:

"The gear system is the key insight most financial advice misses.

Budgeting apps target Trap 1. Debt consolidation targets Trap 2.

Savings automation targets Trap 3. But the gears reinforce each other.

Target the operating system – Present Bias – and the other two become

easier to interrupt automatically. That's exactly what the next video covers."

■■ 10. COMENTARIOS DE AMIGOS — queued y listos para pegar ■■

Amigo 1:

"The hedonic adaptation part hit me. The 85 euro dinner becoming the new floor –

I thought my spending was stable. It was just adjusting upward every month

without me noticing."

Amigo 2:

"I have a savings account and credit card debt at the same time. Right now.

The mental accounting section made me uncomfortable in a way I actually needed."

Amigo 3:

"Future Alex doesn't feel like me. That line is going to live in my head for weeks.

Because it's true. He really doesn't feel like me."

Amigo 4:

"I always thought the problem was discipline. The 'present bias is the operating

system' reframe changes everything. It's not willpower. It's hardware."

Amigo 5:

"The three gears visual is the moment it clicked. Not three separate problems –

one system. Break one gear and the other two lose power.

I'd genuinely never thought about it that way."

■■ 11. REDDIT — staggered, 30 min entre cada uno ■■

- r/personalfinance — primero
- r/BehavioralEconomics — +30 min
- r/psychology — +30 min (radish experiment / Schultz)
- r/cogsci — +30 min

TÍTULO REDDIT (r/psychology / r/BehavioralEconomics):

"Wolfram Schultz proved the brain releases dopamine before the money leaves the account. The decision is already made. By payday, after 5 days of micro-choices, you have the least willpower exactly when you need the most. (Short video mapping the 3 traps and why they scale with income)"

TÍTULO REDDIT (r/personalfinance):

"Researchers at Princeton found that behavioral traps consume the same % of income at 50K as at 150K. It's not a salary problem – it's a system problem. Mapped the 3 specific programs that activate every payday and why naming them isn't enough to stop them. (Short video)"

■■ 12. LINKEDIN POST ■■

Most people think they have a spending problem.

They don't. They have a rewiring problem.

Every payday, your brain runs 3 programs that were designed for a world that no longer exists – and they consume roughly the same % of your income whether you earn 30K or 150K.

Wolfram Schultz (Nobel, Cambridge) proved the dopamine fires before you spend a single euro. The decision is already made.

Richard Thaler (Nobel, Chicago) proved you treat money differently depending on which mental box it's in – even when the math is identical.

David Laibson (Harvard) proved your future self doesn't feel like you. So you don't sacrifice for him.

We mapped all three in 10 minutes.
