

Every Money Bias & Its Effect Explained in 8 Minutes

Formato 9 Catálogo (patrón 4.9M) · Cero hook · Onset/Peak/Comedown por sesgo · CTA beats 32-33 = 39.5%

SCRIPT (NARRATION) · 81 beats · ~1210 words · ~9 min

— BIAS 1 — ANCHORING —

- [1] Anchoring. Anchoring is your brain's habit of trusting the first number it sees.
- [2] It's everywhere. Price tags, salaries, menus. The most consumed bias on Earth.
- [3] You see a jacket: two hundred euros, crossed out. Now ninety.
- [4] The onset is instant. Ninety stops being a price — it becomes a bargain.
- [5] Your brain never asked if the jacket was worth ninety. It only compared it to two hundred.
- [6] At the peak, the crossed-out number does all your thinking. The real question — 'do I even want this?' — never loads.
- [7] The comedown arrives at home: a ninety-euro jacket you never planned to buy.
- [8] Repeated daily, anchoring quietly decides what 'normal' costs — rent, phones, haircuts, everything.
- [9] You never buy the thing. You buy the distance from the first number.

— BIAS 2 — LOSS AVERSION —

- [10] Loss Aversion. The oldest bias in the building.
- [11] Losing a hundred euros hurts about twice as much as winning a hundred feels good. That asymmetry runs your life.
- [12] The onset: you check a price, an account, an investment — and your chest tightens before your thoughts arrive.
- [13] At the peak, you'll do irrational things to avoid a small loss — hold a bad investment, keep a broken subscription, stay in the wrong plan.
- [14] Not to win. Just to not lose.
- [15] The comedown is invisible: all the better options you never took because they smelled like risk.
- [16] Long-term damage: a life optimized against losing is a life that never compounds.
- [17] Your brain doesn't protect your money. It protects the feeling of not losing it.

— BIAS 3 — MENTAL ACCOUNTING —

- [18] Mental Accounting. Your brain runs separate wallets for the same money.
- [19] Salary money is serious. Refund money is free. Birthday money is fun.
- [20] The onset: a hundred euros arrives outside your salary — and it lands in the 'doesn't count' wallet.
- [21] At the peak, you'll spend a tax refund in a weekend while agonizing over a forty-euro grocery bill.
- [22] Same currency. Same account. Different rules.

[23] The comedown: at the end of the year, the 'free money' is gone and you can't name a single thing it built.

[24] Money doesn't come with labels. Your brain prints them.

— BIAS 4 — PRESENT BIAS —

[25] Present Bias. The dealer that always finds you.

[26] To your brain, you-today is a real person. You-in-ten-years is a stranger in a stock photo.

[27] The onset: 'I'll start saving next month.' It feels responsible. It's actually the high.

[28] At the peak, today's wants outvote tomorrow's needs every single time — dinner beats retirement, now beats later.

[29] The comedown never comes today. That's the design. The bill is always addressed to the stranger.

[30] Until one morning you're the stranger, opening the mail.

[31] Present bias doesn't steal your money. It borrows it from someone you haven't met yet — you.

— CTA —

[32] Four down, six to go. If your brain has already shown up twice in this catalog — subscribe.

[33] We name one of these programs every week. Free, painless, and mildly uncomfortable in the good way.

— BIAS 5 — HERD INSTINCT —

[34] Herd Instinct. Social proof. The party drug.

[35] Your brain outsources decisions to the crowd — if everyone's buying, it must be safe.

[36] The onset feels like belonging: everyone has the phone, the trip, the coin, the sneakers.

[37] At the peak, 'everyone's doing it' overrides every number you know. FOMO isn't fear of missing the thing — it's fear of standing outside the group.

[38] The comedown hits when the crowd moves on and you're still holding the receipt.

[39] The crowd got the memories. You got the credit card statement.

[40] Herds are great protection against lions. There are no lions at the mall.

— BIAS 6 — LIFESTYLE INFLATION —

[41] Lifestyle Inflation. The tolerance effect.

[42] Every raise feels enormous for exactly one month.

[43] The onset: more money arrives, and 'needs' quietly upgrade themselves to match. Better coffee. Better car. Better everything.

[44] At the peak, you're earning double what you did five years ago — and saving exactly the same: nothing.

[45] That's tolerance. The dose went up. The effect didn't.

[46] The comedown is the trap itself: there is no comedown. It just becomes your baseline. Forever.

[47] A raise doesn't make you richer. It makes your old life unaffordable.

— BIAS 7 — SUNK COST —

[48] Sunk Cost. The loyalty program of bad decisions.

[49] You keep paying for the gym you don't attend, the course you don't finish, the project that died last year.

[50] The onset is a sentence: 'But I've already put so much into it.'

[51] At the peak, the past runs your future — you throw good money after bad, because quitting would make the loss real.

[52] Here's what your brain hides from you: the money is already gone. It left when you spent it.

[53] The comedown lasts years: every month you stay is another payment on a decision you already know was wrong.

[54] You're not protecting your investment. You're buying tickets to watch it sink.

— BIAS 8 — THE OPTIMISM LOOP —

[55] The Optimism Loop. Planning fallacy, if you want the lab name.

[56] Next month, you'll spend less. Next month has been coming for nine years.

[57] The onset: every budget you make stars a fictional character — a disciplined, unhurried you with no birthdays, no emergencies, no Fridays.

[58] At the peak, you plan for the best month you've ever had — every month.

[59] The comedown arrives on day twenty-something, with a calendar full of exceptions that were 'one-time things.' All twelve months have one-time things.

[60] Optimism is a great life partner and a terrible accountant.

— BIAS 9 — DEFAULT BIAS —

[61] Default Bias. The silent subscription.

[62] Whatever is already happening keeps happening — not because it's good, but because changing it requires a decision.

[63] The onset is nothing. That's its trick. The same bank since you were eighteen. The same tariff. The same insurance, renewing itself in the dark.

[64] At the peak, entire industries price your inertia into their business model — the loyalty penalty has a name because it's that reliable.

[65] The comedown is spread so thin you never feel it: thirty euros here, sixty there, every month, for decades.

[66] The most expensive decisions of your life are the ones you never made.

— BIAS 10 — SCARCITY MINDSET —

[67] Scarcity Mindset. The heavy one.

[68] When money has been tight long enough, scarcity stops being a situation and becomes an operating system.

[69] The onset: money worries start taxing your attention — rent math running in the background of every conversation.

[70] Researchers measured it: active financial scarcity can consume more cognitive capacity than a full night without sleep.

[71] At the peak, the tunnel closes in. Today's fire is all there is. Long-term thinking isn't a choice you're refusing — it's a luxury the tunnel doesn't stock.

[72] And the cruelest part: the tunnel makes the exact decisions that keep you in the tunnel.

[73] The comedown isn't even yours. It's inherited — scarcity teaches children what money feels like before they ever earn any.

[74] Poverty isn't just a number in an account. It's a full-time job your brain works for free.

— CLOSE — THE CATALOG —

[75] Ten programs. One brain. Yours came pre-installed with all of them.

[76] You can't uninstall a bias. Nobody can.

[77] But a named program never runs quietly again — from now on, when one fires, some part of you will be watching.

[78] That part is new. It didn't exist eight minutes ago.

[79] Send this catalog to the friend who's deep in sunk cost right now. They'll know exactly which one they're on.

— NEXT VIDEO TEASE —

[80] Next week: two people. Same salary. Same city. At forty-five, one of them stops needing to work.

[81] The difference fits on a napkin. See you Thursday.
